MARINE ENGINEERING

Your fleet is safe in our hands

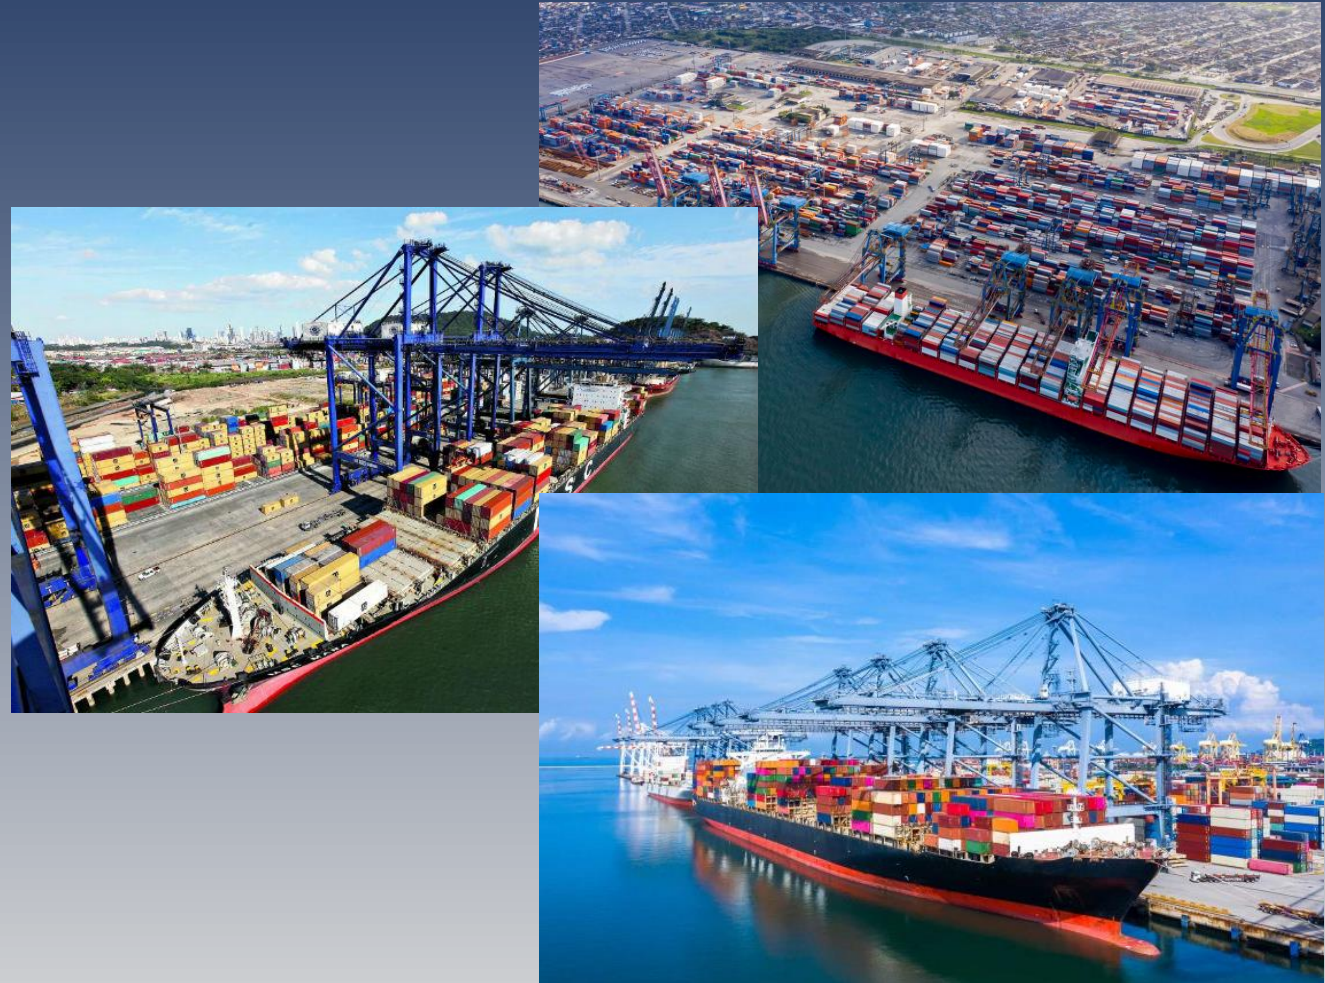

ABOUT US

Alfatec Marine Engineering

Dedicated to the maritime repair and maintenance. Offering complete and immediate technical solutions to our client's needs. Alfatec's track record of success is based on the vast capacity and experience to work safely and efficiently. The main goal is to develop a close relationship with the client, delivering a complete package of maritime services together with quality and fair prices. Our philosophy is to understand the urgency, challenges and expectations of our clients. We have an experienced team of professionals who will work closely with you to provide quality and reliable services. Our services are available 24/7/365 to meet our customers expectations, understanding their urgency, challenges and needs.

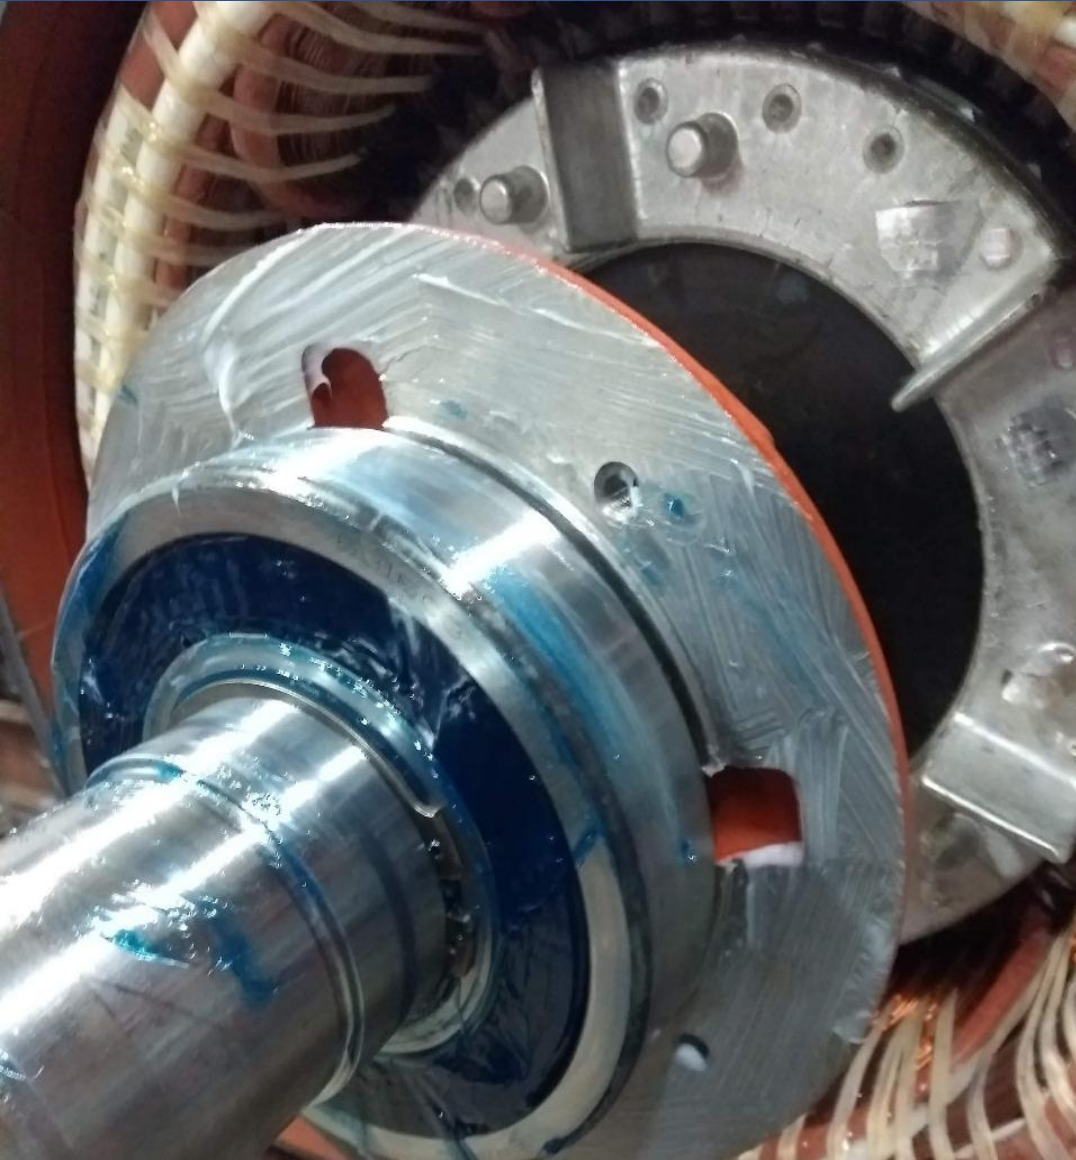

WHAT DO WE DO?

Our activities focused on maritime engineering solutions. Offering comprehensive and safe solutions to any type of ships, whether they are scheduled repairs or unexpected emergencies, dry or afloat under the most relevant standards, in the most important ports in the Americas.

A large green and black ship hull is shown in a dry dock, viewed from the front. The ship is positioned between two long, industrial buildings with rusted metal walls. The sky is overcast with grey and white clouds. The ship's hull is painted green on top and black on the bottom. The word "SERVICES" is written in white capital letters on a dark blue horizontal bar at the bottom of the image.
